

Regenerative Treatment

using Agents of Healing

These treatments help to regenerate and restore tissue and can greatly reduce or eliminate pain. In over 100 years, there has not been one documented adverse reaction.

Amniotic Mesenchymal Stem Cells (MSCs) used in injections are obtained from healthy mothers who have had healthy cesarean deliveries and they have gone through extensive testing before donating their placenta.

Treatment Steps for Agents of Healing

1 Ricochet

Ricochet is an immunonutritional beverage that optimizes your immune system and maximizes healing. Six days before your office injection drink two bottles of Ricochet each day.

2 Office Injection

During your office visit, a small amount of your own blood is drawn to make Platelet Rich Matrix (PRM) using the ClotMaster cup and it is combined with amniotic MSCs (ReGen Anu Rheo). This mixture is then injected into the injury site.

3 Ricochet

After your office visit continue to drink two bottles of Ricochet each day for six days.

4 Juvent

The Juvent platform should be used 20 minutes a day for additional benefit. The Juvent Platform provides soft controlled impulses to the musculoskeletal system and promotes better bone health, less joint pain and better range of motion.

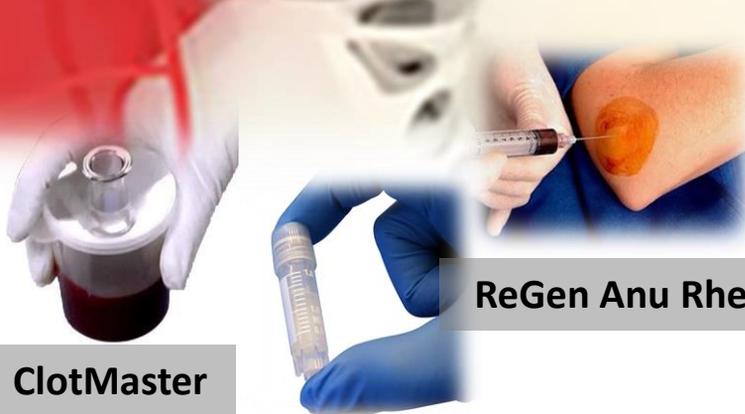

Agents of Healing treats the cause not the symptoms

Before & After Care Patient Instructions

If local anesthetic was used during your treatment you may be sore the day of your procedure. This is NORMAL. The discomfort can last up to 3-4 days. You can Return to normal activities right away.

Tylenol or Extra Strength Tylenol for pain relief is ok to take as needed.

The following are not allowed for 1 week before and 8 weeks after treatment:

All Non-Steroidal Anti-Inflammatories	Motrin
Naprosyn	Celebrex
Mobic	Aspirin
Ibuprofen	Advil
Aleve	Naproxen
Prednisone	Any Corticosteroid

NOTE: If patient is taking any drugs for a potential life threatening event, do not take patient off of these medications. Their physician needs to be consulted.

Outcomes Post-Treatment:

As with all procedures results may vary because no two patients are the same.

Studies Suggest the Following:

25-30% respond within 72-96 hours

30% respond within 3 months

30% response occurs up to 6 – 9 months

10-15% chance of no improvement

For best results, drink two bottles of Ricochet a day, six days before and six days after treatment. Also stand on the Juvent platform 20 minutes a day after treatment.
